Introduction

Welcome to our website-presentation. First of all, we want to talk about what do we want. We want to provide information about sport types and sport grounds. We choose 5 different sport types(football, swimming, skiing, tennis & basketball). I personally play and like football, but my colleague Vanja is a professional swimmer and swims for more than 7 years.

Secondly we want to talk about the main part of our website: The main part of our website is the map. In the map you can perform sports we mentioned.

But what do we want to reach: We want that people visit our website, see the things they need, find a near sport place and the main thing is to have fun.

How was the work split up. We both work together in school but also via discord.

Now I will give my word to Vanja and he will explain to you the website in detail.
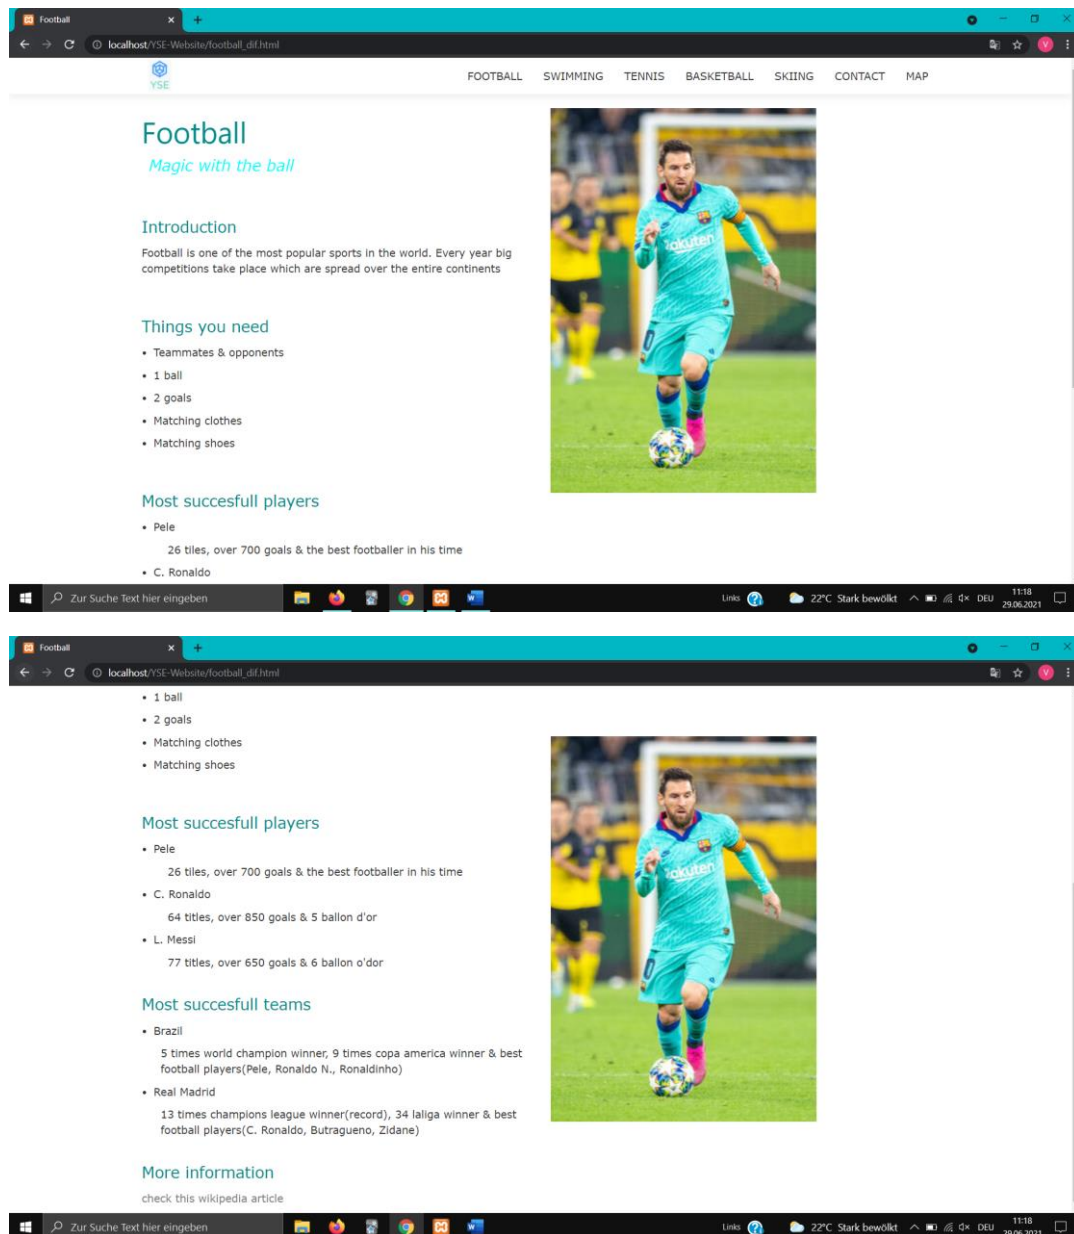

Website

I want to present you now our website. Here you can see our homepage. There is a simple picture of different sport types. At the bottom you can see our name-YourSportExperts. At the top you can see our navigation bar with our different topics(football, swimming, tennis, basketball, skiing, contact & map).

Lets move on to our sport topics. Lets start with football.

.

.

.

.

.

.

.

Every sport topic is based with the same headlines like this topic. Introduction, things you need, most successful players, most successful teams & more information.
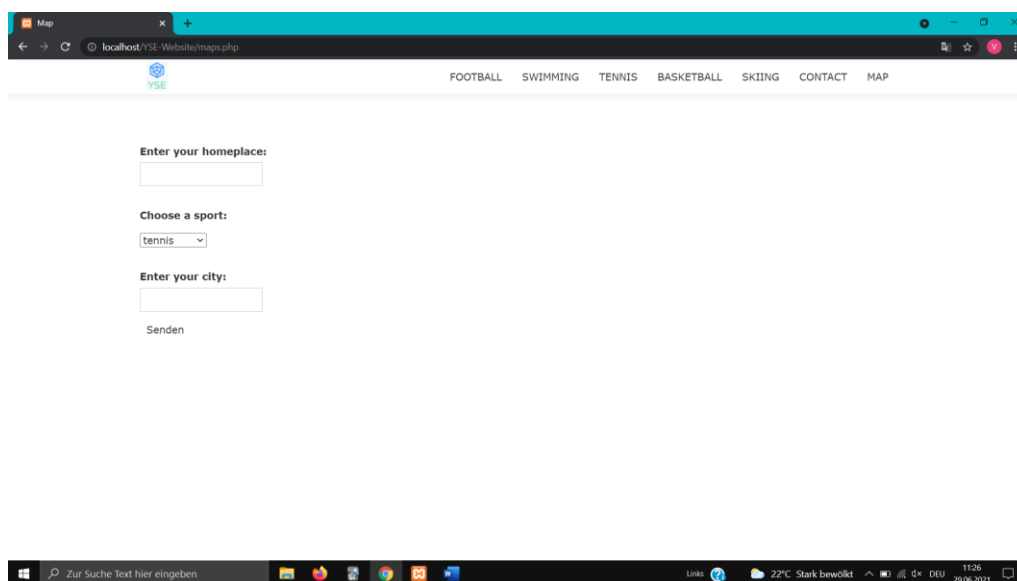

In the introduction you can see a sentence that describes the sport. In things you need you can see everything you need to do the sport. After this you can get some information about the most successful players and teams. At the end, you can click on the link if you want to get some more information on the Wikipedia article.

Lets now move on through the other sport topics. (just running thought)

.

.

.

Now you can see the contact part. You can simply click on the mail link (mail application opens instantly) and you can directly start to write us a message if you want to review our website or tell us something which we can improve.

Last but not least I want to present you our most important part, the map.

Here you can enter your homeplace where you are currently. Afterwards you can choose a sport with a selection bar from the topics we mentioned. After that you can enter your city. Then press enter.

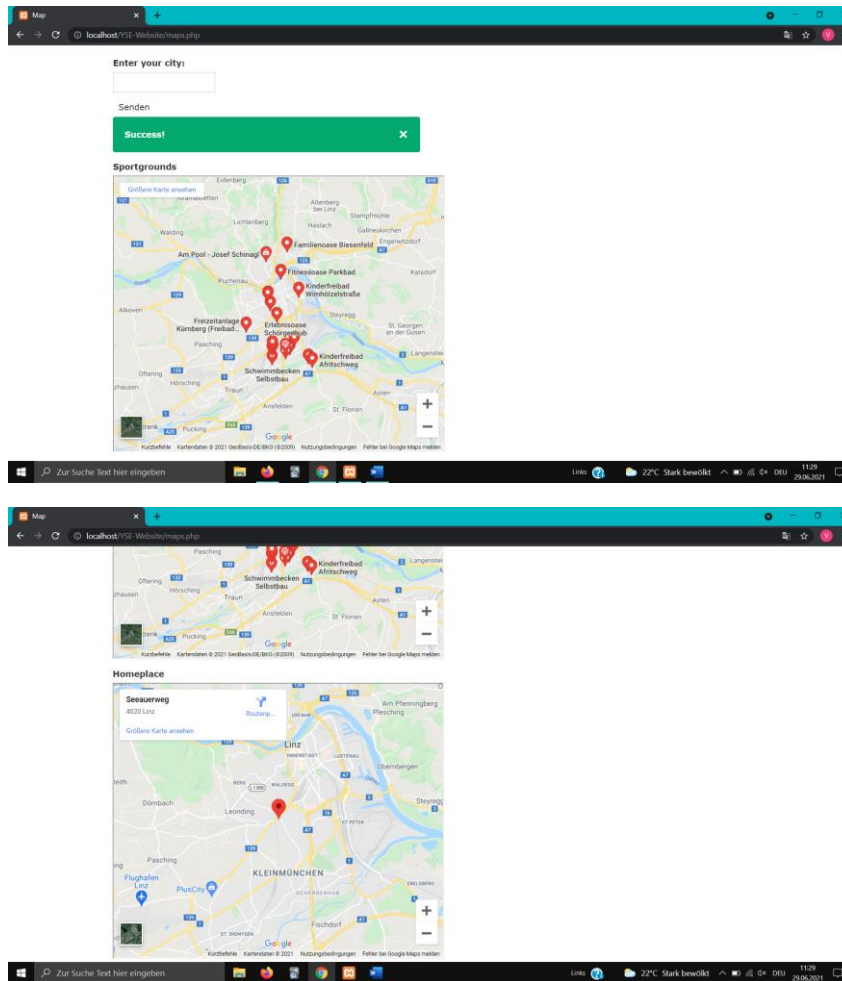

Here is an example input

Now the result shows up. You can see all the swimmplaces in the city you have chosen. Right below it you can see your homeplace. Now you can zoom in and look for the nearest and best place for you.

That was our website. We are happy with our result especially because we are new to the web-programming. The only thing we want to optimize is that you can see your homeplace and the sportgrounds in one map.

I hope you enjoyed our presentation and you like our website.

Thank you for your attention.
